Assessment (MoCA Test).**

PROGRAM OVERVIEW

Join us for this seminar to learn more about an innovative approach to Brain Health and Cognitive Decline. Hear Agnes share about programs related to the clinic in Sarasota.

They are the first primary care clinic that focuses solely on maintaining and improving Brain Health.

Using Dr. Bredesen's protocols for the reversal, treatment, and prevention of cognitive decline, Grey Matters provides patients, caregivers, and families with a comprehensive approach to care.

They focus on cognitive decline, and, unlike other clinical specialties, treat the whole person with primary and integrative, evidence-based care.

Their clinic completes a thorough assessment and works with each patient, their family, and caregivers to develop a personalized care plan to address their total health, current cognitive status, and unique pathologies.
